PROFESSIONAL SUMMARY

Aspiring Machine Learning Engineer with a unique career path, starting as an actuary (6+ years) drawn to the deep mathematical rigor before transitioning into software engineering (6+ years) to explore creativity and logical problem-solving. Discovered ML/AI through mentorship—a perfect fusion of passions—and became fascinated by its ability to learn, adapt, and optimize decisions. This enthusiasm led to pursuing a master's degree at Georgia Tech while successfully balancing full-time work and graduate studies.

EDUCATION

Georgia Institute of Technology – (Online) - Master of Science in Computer Science (ML) 01/2022 – 12/2024
Cumulative GPA - 4.00/4.0

Relevant Coursework:

- Reinforcement Learning: Trained deep RL policies to optimize coordinated behavior between multiple agents utilizing reward shaping and Deep Q-Networks (DQN)
- Machine Learning: Conducted rigorous experimental analysis on the effects of dataset characteristics (e.g., size, dimensionality, distribution) on the effectiveness of supervised learning (e.g., KNN, Decision Trees, Boosting, Neural Networks) and unsupervised learning (e.g., clustering, dimensionality reduction) techniques using two databases, and explored Robust PCA as a technique for dimensionality reduction and recommendation systems.

The University of Akron – Akron, OH – Bachelor's Degree in Statistics - Actuarial Science 08/2006 – 12/2010
Cumulative GPA – 3.67/4.0

EXPERIENCE

Fifth Third Bank – Cincinnati, OH (Remote)

Lead Software Engineer

01/2022 – 07/2024

- Spearheaded strategic initiatives with senior leadership team to implement a machine learning-powered customer segmentation model in a highly regulated industry, driving adoption, innovation, and competitive advancement in an AI-driven business landscape
- Aided executives in analyzing millions of fraud event data to make analytical insights resulting in savings of 20% savings on vendor invoice, an estimated \$500,000 annual savings
- Leveraged Snowflake-based application monitoring, including the development of SQL queries to extract relevant performance metrics for the creation of dashboards/visualizations to track key operational trends
- Coached three teams (3–7 developers each) on best practices for coding and testing Python in AWS Lambda functions, ensuring efficiency and reliability
- Served as the team's representative in collaborative quarterly discussions with dependent engineering teams and architects, focusing on aligning overlapping priorities and ensuring adherence to bank stakeholders' objectives
- Represented the organization at NKU Cybersecurity Symposium by presenting 'Unleashing the Power of Reinforcement Learning: Man versus Mancala.' Shared insights on developing an RL agent to play Mancala, real-world RL applications, and addressing common misconceptions, reinforcing how state-of-the-art machine learning techniques can contribute to a positive and ethical future.
- Mentored 3 junior engineers, an expansion of role as a contracted developer

EXPERIENCE (Continued)

Callibrity – Cincinnati, OH

Senior Software Developer – Contractor (Fifth Third Bank)

08/2018 – 12/2021

- Adapted quickly to launch the first AWS microservice API design at the bank on time, at quality
- Reduced financial crimes by \$750,000 within first year of microservice's initial deployment by profiling +500K daily logins with integration of third-party service
- Advised prospective clients on AI services during Point-of-Sale calls, leveraging AI expertise and communication skills
- Designed a multiple asynchronous Step Functions architecture to reduce response time of application by 60% and improve scalability
- Performed load balancing to ensure application could handle the 99.9999th percentile and presented the analysis for other teams to implement

ViaForge – Grove City, OH

Web Developer (Remote/Freelance)

01/2018 – 07/2018

- Built a React.js application of the company's client list to simplify and secure coworkers' ability to track the status of existing and prospective clients
- Initiated self-learning in organic SEO and Google Ads to improve client experience and increase exposure, which led to reported spikes in client business

Nationwide Mutual Insurance Company – Columbus, OH

Pricing Consultant (Remote)

07/2016 – 12/2017

- Automated a tool to rerate thousands of policies utilizing Visual Basic, Access, and SQL. Saving the department hundreds of hours per state rate reviews and enabled other tools to be built from the output.

Senior Pricing Analyst

07/2014 – 11/2015

- Performed analysis on factors to be presented to Product Managers for making business decisions for auto premium based on state forecasting
- Increased volunteer participation by 50% while a member of Mid-Ohio FoodBank Committee

ACHIEVEMENTS & CERTIFICATIONS

Google Cloud Certified Professional Data Engineer

06/2020

Named Vice President of Mid-Ohio FoodBank Committee

01/2015

Passed Actuarial Exams:

- P-1, FM, MFE, C, and ST

PROFESSIONAL SKILLS

Programming Languages/Frameworks:

- Python | Java | Spring | C++ | C# | MATLAB | R | JavaScript | React | VBA | NumPy | Pandas | PyTorch | Scikit-Learn | TensorFlow | Keras | ROS2 | Jupyter notebooks

Cloud Environment:

- Amazon Web Services (AWS) | Google Cloud Platform (GCP)

Databases:

- DB2 | Oracle | Postgres | Hadoop | MySQL | BigTable | Datastore | DynamoDB | Snowflake

Operating Systems:

- OS X | Windows | Linux

Tools/Other:

- Git | Jenkins | Web services (REST & SOAP) | Splunk | Docker | Kafka | CI/CD | TDD | Microservice architecture | Event driven architecture | Excel | Tableau | Apache Nifi | Unity
